

DAY 18 REPORT

Task: Sales & Revenue Analysis Dashboard using Power BI

Introduction

Power BI is a business intelligence and data visualization tool used to create interactive dashboards and reports. In this task, a Sales & Revenue Analysis Dashboard was created to analyze revenue performance based on products, regions, categories, and dates using different visualizations and filters.

Dashboard Visuals Used

1. KPI Cards

KPI cards were created to display important business metrics:

- **Total Revenue:** 330K
- **Total Sales:** 29
- **Average Revenue:** 32.96K

These cards provide a quick overview of overall sales performance.

2. Bar Chart – Sum of Revenue by Product

A bar chart was created to compare revenue generated by products such as:

- Laptop
- Mobile
- Tablet
- Shoes
- Headphones
- Watch
- Bag

The chart shows that Laptop generated the highest revenue among all products.

3. Bar Chart – Sum of Revenue by Region

A regional comparison chart was added for:

- Chennai
- Madurai

- Coimbatore
- Salem
- Trichy

This chart helps identify the regions contributing more revenue.

4. Pie Chart – Sum of Revenue by Category

A pie chart was created to display category-wise revenue distribution:

- Electronics
- Fashion

The chart clearly shows that Electronics contributed the highest percentage of revenue.

5. Line Chart – Revenue Trend Analysis

A line chart was added to analyze revenue trends over different dates in January. This visual helps identify increases and decreases in daily revenue.

Interactive Features Added

Slicers and Filters

Interactive slicers were added for:

- Product
- Region
- Category
- Date

These filters allow users to dynamically analyze dashboard data based on selected values.

Date Range Slider

A date slider was added to filter records between selected dates for better analysis.

Dashboard Design

- Applied a green-themed dashboard background.
- Organized visuals properly for better readability.

- Used borders, spacing, and alignment to improve presentation quality.
-

Tools Used

- Microsoft Power BI
-

Outcome

The Sales & Revenue Analysis Dashboard was successfully created with multiple visualizations and interactive filters. The dashboard provides meaningful insights into product performance, regional revenue, category distribution, and sales trends.

Conclusion

Through this task, I learned how to create interactive dashboards in Power BI using KPI cards, bar charts, pie charts, line charts, slicers, and filters. I also improved my skills in dashboard design, formatting, and business data visualization.
